Title: FPGAs for everyone

Subtitle: Integrating FPGAs with standard personal computers

Speaker: byterazor

Short: FPGAs are becoming more and more common in research and industrial projects.

They are mostly used to accelerate problems of High Performance Computing. But standard personal computers can also benefit from them, e.g. with cryp-

tographic accelerators, additional processor cores, hardware for special projects.

This talk describes possible benefits for FPGAs in General Purpose Computing, and their requirements to the FPGA Host connection and the operating system

support.
