Title:

A practical prototyping primer

Subtitle: A rather unstructured selection of things I wished I knew 10 years ago.

Speaker:

Lieven Standaert

Short: This will be a rapid-fire, tips-and-tricks lecture on practical prototyping. It will cover a series of practical tips, strategies & techniques, illustrated with all the mistakes I made over the past 10 years designing & building stuff. The lecture is intended for a non-specialized audience with a basic understanding of what a lasercutter, a 3D-printer and a milling machine does.
